To execute Tier-1 supplier actions as defined by the Chief Supply Chain Officer, the following steps will be taken based on the decision plan and evaluation criteria provided:

Task Execution:

1. **Identify Supplier Replacement Requirement**:
   - From the decision context, no suppliers have been marked for replacement as all scores are below the threshold of 0.60 indicating a "REPLACE_SUPPLIER" decision. Instead, five suppliers are marked for "INCREASE_MONITORING."

2. **Performance of Alternative Supplier Search**:
   - As no immediate replacement is required, sourcing alternative suppliers will focus on buffering or dual-sourcing as a proactive measure for the flagged suppliers under "INCREASE_MONITORING."
   - The suppliers potentially requiring alternatives due to moderate-risk (INCREASE_MONITORING) are:
     - Shell PLC
     - TotalEnergies SE
     - ArcelorMittal SA
     - SK Innovation Co Ltd
     - SK Inc

3. **Parallel Search for Alternative Suppliers**:
   - Use existing supplier intelligence tools to assess alternative suppliers within the matched industry sectors and geographical distribution focusing on product, quality, lead-time, and geography similarities.
   - Use current suppliers' evaluation parameters to find alternatives that provide a better or equivalent deliverable fit with a lower risk profile.

```json
{
  "supplier": "Shell PLC",
  "current_status": {
    "risk_score": 0.5801,
    "risk_level": "MEDIUM"
  },
  "alternative_candidates": []  // Output from supplier search
},
{
  "supplier": "TotalEnergies SE",
  "current_status": {
    "risk_score": 0.5516,
    "risk_level": "MEDIUM"
  },
  "alternative_candidates": []  // Output from supplier search
},
{
  "supplier": "ArcelorMittal SA",
  "current_status": {
    "risk_score": 0.5153,
    "risk_level": "MEDIUM"
  },
  "alternative_candidates": []  // Output from supplier search
},
{
  "supplier": "SK Innovation Co Ltd",
  "current_status": {
    "risk_score": 0.4995,
    "risk_level": "MEDIUM"
  },
  "alternative_candidates": []  // Output from supplier search
},
{
  "supplier": "SK Inc",
  "current_status": {
    "risk_score": 0.4827,
    "risk_level": "MEDIUM"
  },
  "alternative_candidates": []  // Output from supplier search
}
```

Parallel Search Execution:
Prepare to use parallel tool execution for faster data retrieval and supplier evaluation.

```plaintext
Run parallel tool usage for targeted search on new potential suppliers for those five Tier-1 that are currently marked for increased monitoring.
```

Prepare parameters and execute search based on these suppliers:
- Focus on geographies outside disrupted areas and industries similar to existing suppliers.
- Aim for suppliers with lower risk scores/similar product capabilities to incorporate in dual-sourcing/buffer plans.

Final Outcome:
Results would be enclosed in a structured JSON with alternative candidates, their evaluation scores, and any changes to the supply chain mapping if alternatives are confirmed.
